PROFESSIONAL SUMMARY

Final-year **Computer Science Engineer** with production experience in **full-stack development, distributed systems, and real-time applications**. Proficient in **React 18, TypeScript, Next.js, Node.js, Kafka**, and **Redis**. Demonstrates strong **problem-solving** and **system design** skills, evidenced by a track record of building scalable, maintainable solutions.

WORK EXPERIENCE

Full Stack Developer | Freelance

Nov 2025 - Dec 2025

Self-Employed / Client Project

- Developed a production e-commerce platform featuring a custom hamper builder and a complete **Razorpay** payment flow (order creation, COD, signature verification, order tracking), enhancing mobile conversion by **25%** through responsive design and **Framer Motion** animations.
- Engineered the frontend with **React, JavaScript, TypeScript, Vite, TailwindCSS**, and **Shadcn/UI**, delivering a fully responsive and animated user experience.

Technologies / Skills Used : React, JavaScript, TypeScript, Vite, TailwindCSS, Razorpay

PROJECTS

Console Me | 🐙 Gopaljha16 📁

Feb 2026 - Present

- Developed a **creator monetization platform** with three subscription tiers, enabling creators to monetize content via tiered access for subscribers.
- Implemented **tiered access control** using Clerk, reducing custom authentication code and setup time by approximately 60%.
- Created an **Omegle-style video chat** with LiveKit WebRTC and Redis-based matchmaking, optimized for scalability across multiple servers using **Socket.IO**.
- Engineered a **Kafka pipeline** for asynchronous processing of messages, notifications, and posts, facilitating horizontal scaling of worker services.

Technologies / Tools Used : Next.js, TypeScript, Express, Socket.IO, LiveKit, Kafka, Redis, PostgreSQL

Quibly | 🐙 Gopaljha16 📁

Jan 2026 - Feb 2026

- Engineered** a horizontally scalable **real-time system** utilizing Socket.IO and Node.js clustering with consistent hashing for session affinity, achieving **5,000+ messages/sec** at sub-50ms p99 latency during peak loads.
- Designed** a Kafka-Redis pipeline featuring write-through caching and batched PostgreSQL writes, resulting in a **~70% reduction** in database write load while preserving message ordering through Kafka partition keys.
- Implemented** role-based access control (RBAC) with channel permissions and audit logging; optimized permission checks to **O(1) Redis cache lookups**, eliminating database round-trips on every message event and supporting **50+ concurrent users** with zero downtime.
- Automated** Docker-to-Kubernetes delivery via a Jenkins CI/CD pipeline, cutting deployment time by **40%** and achieving zero-downtime releases.

Technologies / Tools Used : Next.js, TypeScript, Kafka, Redis, PostgreSQL, Express

SKILLS

Programming Languages :	C++, JavaScript, TypeScript
Frontend Development :	HTML5, CSS3, React, Redux, Next.js, Framer Motion, Shadcn/UI, Vite, TailwindCSS
Backend Development :	Node.js, Express.js, REST APIs, Microservices, Kafka, WebSockets, Socket.IO
Databases & System Design :	MongoDB, PostgreSQL, Redis, System Design
Generative AI :	Prompt Engineering, Google Gemini API, RAG, OpenAI API, and LangChain
Tools & Cloud :	Git, Github, Docker, Jenkins, AWS, CI/CD Pipelines, Kubernetes, WebRTC, Turborepo

EDUCATION

Malla Reddy College of Engineering

Aug 2022 - May 2026

B.Tech in Computer Science and Engineering & Information Technology

CGPA : 7.7

ACHIEVEMENTS

- Solved **300+** DSA problems across LeetCode and GFG with strong foundations in problem solving and algorithmic thinking
- Developed **3 full-stack production platforms** with real-time capabilities, CI/CD automation, and scalable architecture.

CERTIFICATION

Full Stack Web Development

2025

CoderArmy
